TROCKENBAUSCHRAUBEN
DRYWALL SCREWS

GROBGEWINDE FÜR HOLZ
FEINGEWINDE FÜR METALL

TROCKENBAUSCHRAUBEN

Durch die Verwendung von Trockenbauschrauben (Schnellbauschrauben), lassen sich Gipskartonplatten an Holz oder Metall anbringen. Trockenbauschrauben gibt es in verschiedenen Längen und Größen, das wichtigste Unterscheidungsmerkmal ist jedoch ihr Gewinde. Unterschieden werden sie in Grob- und Feingewinde. Alle Trockenbauschrauben haben einen Trompetenkopf. Durch die ebene Oberfläche schauen die Schrauben nach der Befestigung nicht aus dem Gipskarton heraus und die Löcher lassen sich meist spielend leicht mit Spachtelmasse füllen. Sollten Sie die Wand jedoch verputzen wollen, entfällt dieser Arbeitsschritt.

DRYWALL SCREWS

By using drywall screws, plasterboards can be attached to wood or metal. Drywall screws are available in various lengths and sizes, but the most important distinguishing feature is their thread. A distinction is made between coarse and fine threads. All drywall screws have a trumpet head. Due to the flat surface, the screws do not look out of the plasterboard after fastening and the holes can usually be easily filled with putty. However, if you want to plaster the wall, this step is not necessary.
